

G [Please provide the following new abstract of the disclosure:]

A hand-guided percussion drilling machine has a machine housing, a drilling spindle having an axis, a drive motor for rotatably driving the drilling spindle and having a motor shaft, an impact mechanism for strikingly driving the drilling spindle, a tool holder formed as a drilling chuck and screwed with the drilling spindle through a thread, an arresting device non-rotatably coupling the drilling spindle relative to the machine housing, an intermediate shaft located between the motor shaft and the drilling spindle, rotatably connected with the drilling spindle and extending parallel to and at a distance from the driving spindle, the arresting device being arranged between the intermediate shaft and the machine housing or a component connected with the machine housing, the arresting device opening during a torque transmission from the drive motor to the tool in one direction and closing during a torque transmission from the tool holder in an opposite direction and positioned such that it is not subject to strikes of the impact mechanism.
